
COBOL KeePÍR

for UFO to iSeries AS/400

Technical Product Overview

Mainframe UFO to NATIVE AS/400 COBOL

PÍR Group presents COBOL KeePÍR for UFO to the AS/400–

COBOL KeePÍR for UFO to iSeries COBOL is an automated conversion utility that converts Mainframe UFO to native AS/400 COBOL. The COBOL KeePÍR solution converts the file access into the DB2/400 relational database. The tool provides a seamless conversion and runtime environment. Conversion to the AS/400 platform allows both end-users and the programming staff to be quite effective immediately following the conversion.

COBOL KeePÍR for UFO to AS400 COBOL includes many features to insure that converted code is easily maintainable and any learning curve for the programming staff is kept to a minimum.

- The program algorithm restructured into a standard COBOL format.
- Any code added is “flagged” and is kept in-line with the code in the programs.
- Our team works closely with your programming staff to ensure satisfaction of the delivered code.
- Our run-time environment is easily modifiable.
- Several options are available to increase the “Openness” of your existing COBOL programs:
 - Externalize all program-based file I/O to callable sub-routines.
 - Externalize all program-based screen I/O to callable sub-routines.
 - Conversion-based global replacement.
 - Extensive conversion documentation available on each program.

Thus programmers who are familiar with the mainframe programs will easily maintain and enhance their AS400 clones. This dramatically reduces programmers' learning curve on the new platform and provides a high confidence level that when a converted program compiles; it will duplicate the mainframe transaction.

COBOL KeePÍR for UFO GENERAL FEATURES:

- The utility reads and converts programs written in UFO producing output in AS/400 native COBOL.
- A robust conversion environment or single command converts and compiles an entire application. The utility takes advantage of both batch or on-line for the conversion process to run.
- The utility supports UFO Cycle and pseudo-conversational program structures.
- The conversion environment has the “look and feel” of a standard AS/400 command interface.
- All comments contained in the original code appear in the same location in the converted AS/400 COBOL program.
- All AS/400 COBOL datanames generated by the utility are created using existing definitions in the client code.
- All copy book/+INCLUDE code is converted and retains the same member name identity.
- The tool generates a series of conversion reports as well as detailed program-by-program information.

PÍR Group/COBOL KeePÍR for UFO SCREEN SUPPORT FEATURES:

- Each BMS MAP set is converted to native AS/400 DDS (Data Description Specifications) and a COBOL Screen Handler that replaces and duplicates CICS screen map processing.
- All BMS field names and BMS keywords are retained and converted to their respective AS/400 counterpart.
- PF keys, cursor feedback/positioning, and screen field attributes are converted to retain the "look and feel" of the original transaction.
- The original screen layouts are preserved, and the conversion is transparent to the user community.

PÍR Group/COBOL KeePÍR for UFO FILE SUPPORT FEATURES:

- Files (VSAM/DB2/DL1) are converted to DB2/400 physical and logical file formats. The DDS generated for these files are based on the original COBOL description for these files.
- CICS/VSAM file access is converted to the appropriate AS/400 COBOL file access commands. (Read, Write, Delete, Rewrite, etc.....)
- Variable Length Records will be converted to fixed length files. The client has the option to use other solutions implemented by PIR Group; this is outside the conversion scope and would be billed at a standard billing rate.

PÍR Group/COBOL KeePÍR for UFO FEATURES NOT SUPPORTED:

- 3270 data streams

AREAS REQUIRING MANUAL INTERVENTION:

- Certain uses of BLL Cells
- JCL created by the Cobol program
- EASYTRIEVE
- DOS/VSE \$LST Cards
- Assembler programs
- C programs
- BMS paging options used on screens
- Light Pen & Bar Coding functionality
- Some areas of "Report Writer" programs
